Total	10148	6528	5149	50.7	78.9

^aMultiple race, American Indian/Alaska Native, Asian, Native Hawaiian/Other Pacific Islander, and unknown race.

^bHeterosexual contact with person known to have, or to be at high risk for, HIV infection.

^cPersons who have at least one CD4 or viral load test are considered as receiving HIV care.

^dCD4 or viral load tests that have been done in the same month are considered as one care visit, even two tests that one is CD4 test and the other one is viral load test are still considered as one care visit.

^eTwo care visits should be 3 months apart.

¹The overall population is overestimated because cases are only followed up for 12 months after 12/31/2011. CDC suggests that every case should be followed up at least 18 months to collect death certificate information.
